

Saline Slime

Prep Time: 3-5 minutes • Make Time: 5 minutes • 1 batch

Ingredients

1/2 Cup of Clear or White Washable School Glue	Food Coloring
1/2 Cup Water	Glitter
1/2 tsp of Baking Soda	Foam Beads
1 tbs Saline Solution	Confetti
	Crunchy Beads

Instructions

- 1 Combine glue and water in a bowl and mix well to combine. Omit water for a putty like substance.
- 2 Stir in food coloring or scented slime oils.
- 3 Add baking soda and mix well. Baking soda helps to make the slime firm. Experiment with different amounts!
- 4 Mix-Ins Step: Drop in 1 tbsp of glitter, 1 tbsp of confetti, 1 cup of foam beads, or 1/2 cup of crunchy beads, Or add mix-ins as desired!
- 5 Pour in saline solution and mix until slime forms. Use hands to knead slime until desired consistency is achieved.

Fluffy Slime

Prep Time: 5 minutes • Make Time: 5 minutes • 1 batch

Ingredients

1/2 Cup of White Washable School Glue
3 Cups Foam Shaving Cream
1/2 tsp of Baking Soda
1 tbs Saline Solution
Food Coloring

Instructions

- 1 Add 3 cups of foam shaving cream to a bowl. Do not use gel shaving cream.
- 2 Stir in food coloring. Use can use scented slime oils, but the shaving foam is usually scented as well.
- 3 Add glue and gently stir to combine.
- 4 Stir in baking soda and mix well.
- 5 Pour in saline solution and mix until slime forms. Use hands to knead slime.

Slime

Fun Mix-Ins

For Clay or Butter Slime: Knead a few ounces of soft clay into a batch of slime.

For Cloud Slime: Make a batch of insta snow according to directions and mix 1/2 a cup into a batch of slime.

For Foil Slime: Lay several gold or metallic foil sheets on top of a batch of slime and press into the slime. See left.

For Scented Slime: Add 1 tbsp of Jello powder to the recipe during the mix-ins step.

Tips

- 1 Saline solution must contain sodium borate and boric acid as active ingredients. Do not use contact lens solution.
- 2 Slime loves to be kneaded. Make sure to knead the slime for several minutes before adding more saline solution. Squirt a few drops of solution on your hand to knead the slime.
- 3 If your slime is still too sticky, add a drop of saline solution. Do not add too much! As the slime cools from the chemical reaction, it will become less sticky and can become too firm.
- 4 For best stretch, slowly apply pressure and pull. If you pull too hard it will snap.
- 5 Store your slime in a container with a good fitting lid for several weeks or more.
